

Technical Implementation Proposal

SustAIn - Green Building Project Management Platform

1. Project Overview

1.1 Objective

Development of a comprehensive web-based platform to streamline green building certification processes and project management for sustainability consultants.

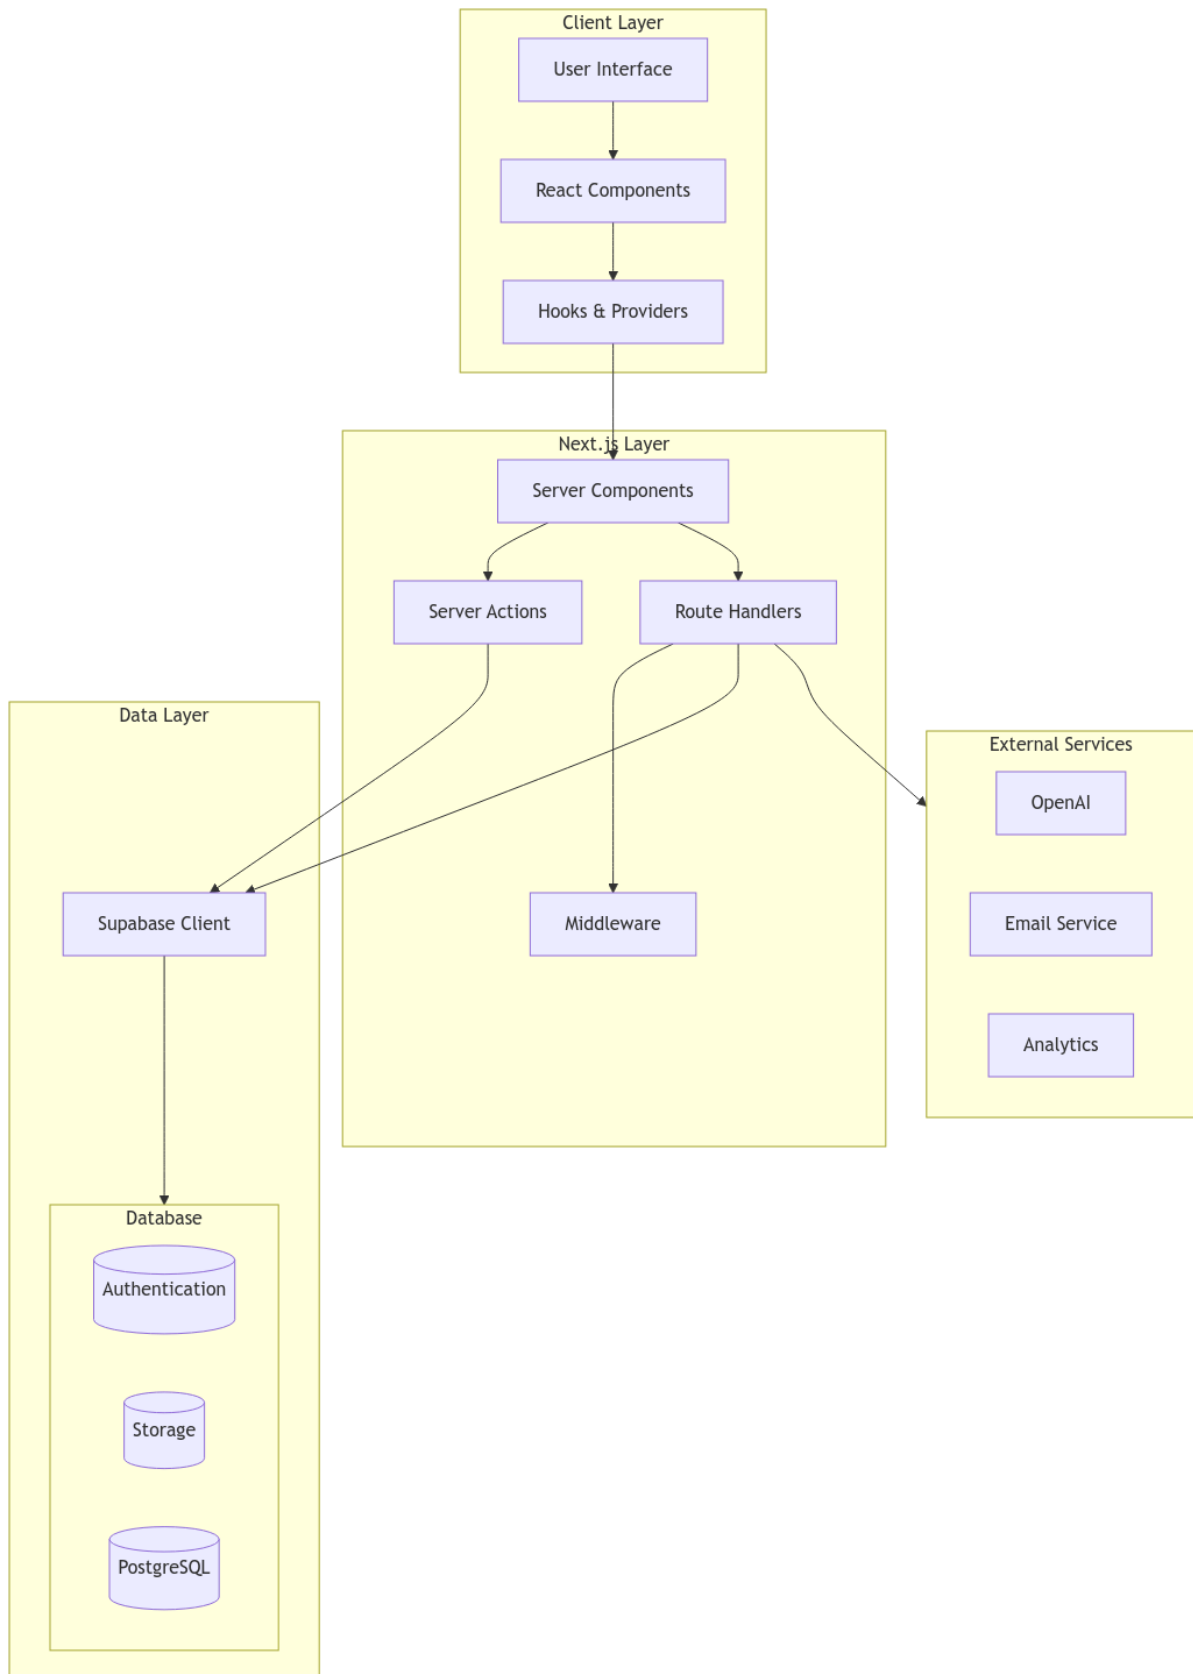

1.2 Key Stakeholders

1. Sustainability Consultants (Primary Users)
2. Building Owners/Clients
3. Contractors
4. Team Members
5. System Administrators

1.3 Core Features

1. Project Management Dashboard
 2. Document Generation & Management
 3. AI-Powered Compliance Checking
 4. Real-time Progress Tracking
 5. Automated Action List Generation
 6. Tender Specifications Generator
-

2. System Architecture

2.1 High-Level Architecture

We will implement a modern, scalable architecture using:

- **Frontend:** Next.js 14 (App Router)
- **Backend:** Serverless Architecture with Next.js API Routes
- **Database:** Supabase (PostgreSQL)
- **Authentication:** Supabase Auth
- **File Storage:** Supabase Storage
- **AI Integration:** OpenAI API/ In House Model

2.2 Key Technical Advantages

- Serverless Architecture: Reduced operational costs
 - Real-time Capabilities: Instant updates
 - Scalable Infrastructure: Handles growth
 - Modern Tech Stack: Future-proof
 - Strong Security: Enterprise-grade
-

3. Technical Stack Details

3.1 Frontend Technologies

- Next.js 14 with TypeScript
- React Server Components
- TailwindCSS for styling
- Shadcn UI for components
- Zustand for state management
- React Query for data fetching

3.2 Backend Services

- Next.js API Routes/ Server Actions
- Supabase Real-time subscriptions
- Edge Functions for processing
- Serverless Functions
- WebSocket connections

3.3 Database Structure

- PostgreSQL with Supabase
- Real-time capabilities
- Row Level Security
- Automated backups
- Data encryption

3.4 Integration Points

- OpenAI API for AI features
 - Email service integration
 - Analytics integration
 - Export capabilities
-

4. Feature Implementation Details

4.1 Authentication System

Features:

- Multi-role support
- Email verification
- Password recovery
- 2FA (Optional)
- Session management

4.2 Project Management Module

Features:

- Project creation/management
- Team assignment
- Progress tracking
- Timeline management
- Real-time updates

4.3 Document Management System

Features:

- Automated generation
- Version control
- Access control
- Real-time collaboration
- AI-powered analysis

4.4 AI Integration

Features:

- Document analysis
 - Compliance checking
 - Pre-scoring tool
 - AI chatbot assistance
 - Automated reporting
-

5. Security & Access Control

5.1 Role-Based Access Control

1. System Administrator

- Full system access
- User management
- System configuration

2. Lead Consultant

- Project creation
- Team management
- Full feature access

3. Team Member

- Assigned project access
- Document management
- Limited admin features

4. Client

- Project viewing
- Document upload
- Progress tracking

5. Contractor

- Task-specific access
- Document submission
- Limited viewing

5.2 Security Measures

- Data encryption at rest
 - SSL/TLS encryption
 - Regular security audits
 - Automated backups
 - Activity logging
-

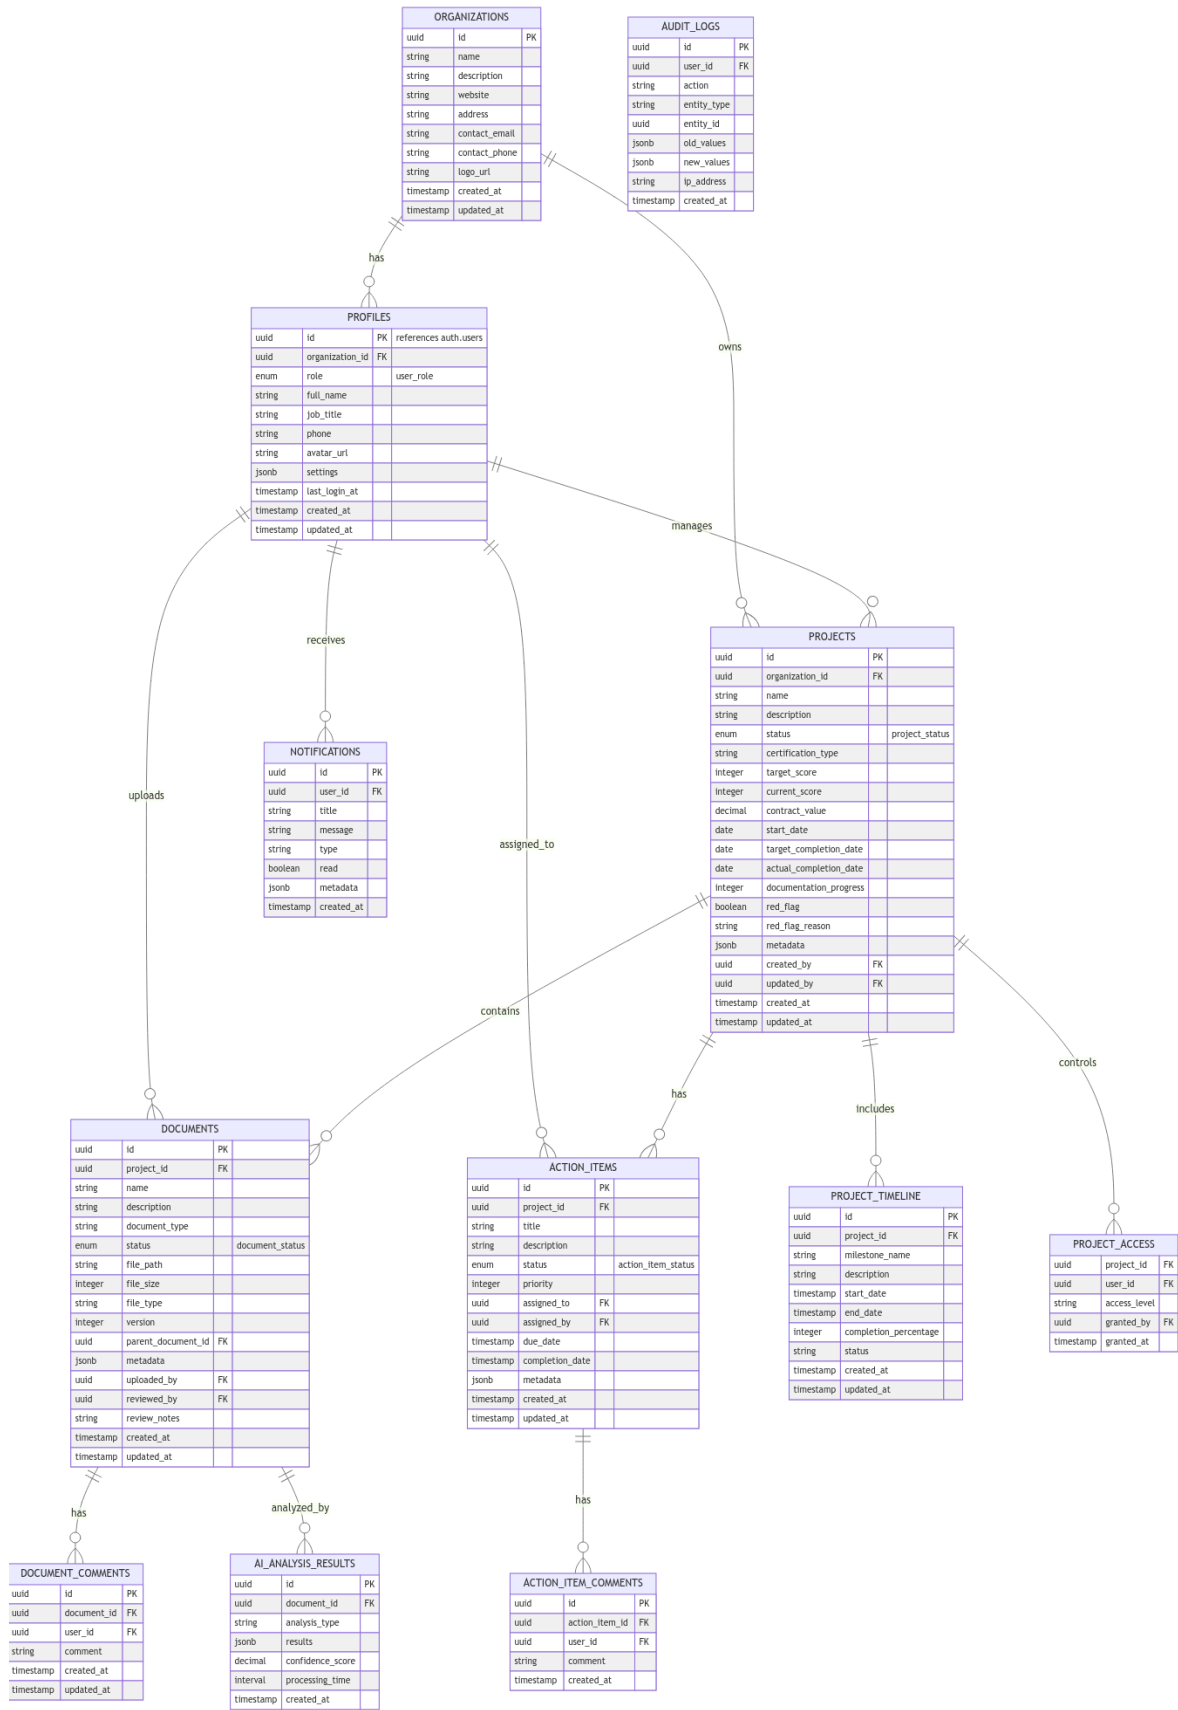

6. Database Tables

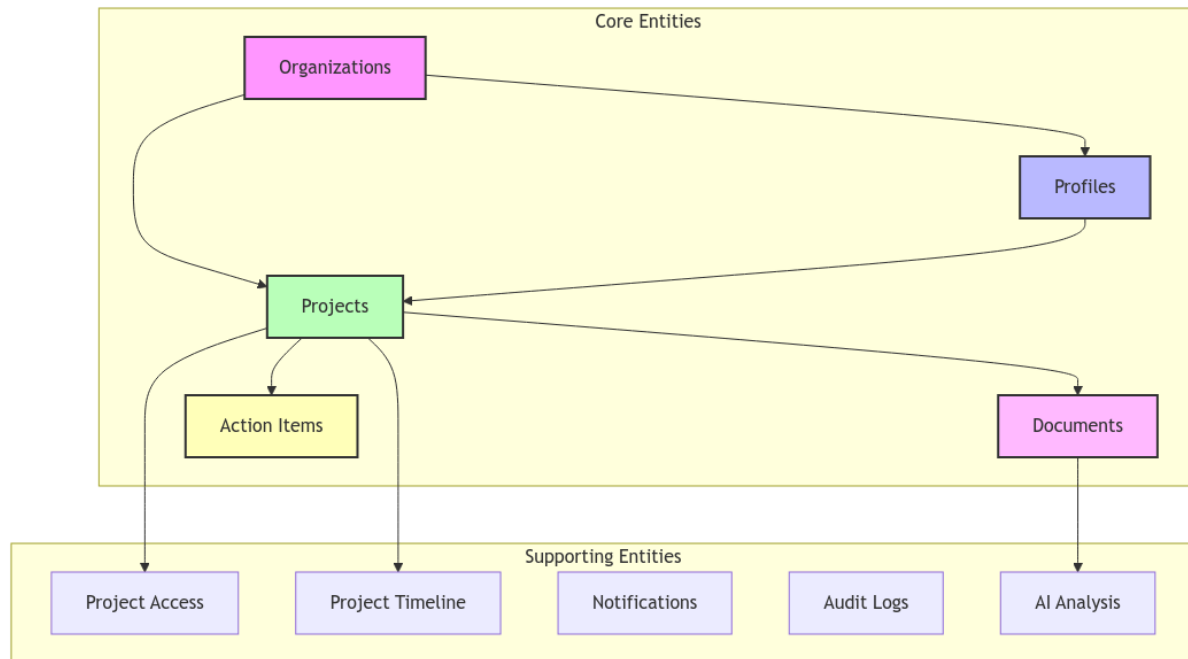

Core Tables:

- **organisations**: Company/firm details
- **profiles**: Extended user profiles
- **projects**: Main project information
- **documents**: Document management
- **action_items**: Tasks and to-dos
- **notifications**: User notifications

Supporting Tables:

- **project_access**: Access control
- **document_comments**: Document feedback
- **action_item_comments**: Task discussions
- **project_timeline**: Project milestones
- **audit_logs**: System audit trail
- **ai_analysis_results**: AI processing results

Key Relationships:

Organisation-Centric:

- One organisation has many profiles (users)
- One organisation owns many projects
- Organization is the top-level entity

Project-Centric:

- Project belongs to one organisation
- Project has many documents
- Project has many action items
- Project has one timeline
- Project has multiple access controls

User-Centric:

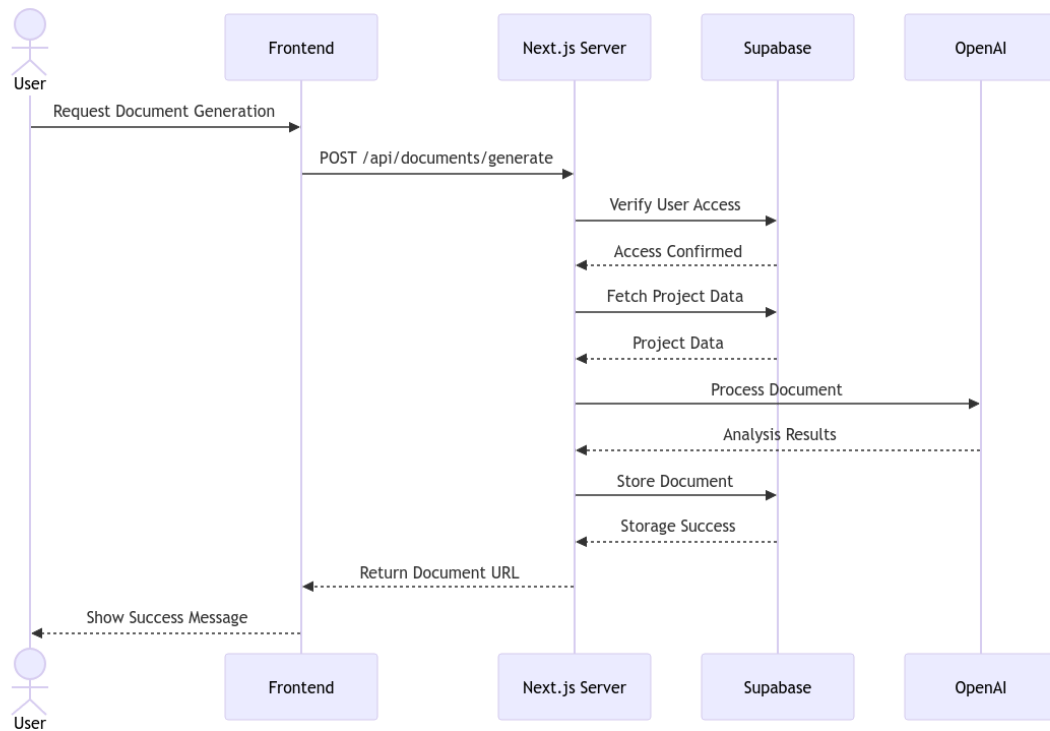

- User belongs to one organisation
- User can access multiple projects
- User can be assigned multiple action items
- User can upload multiple documents

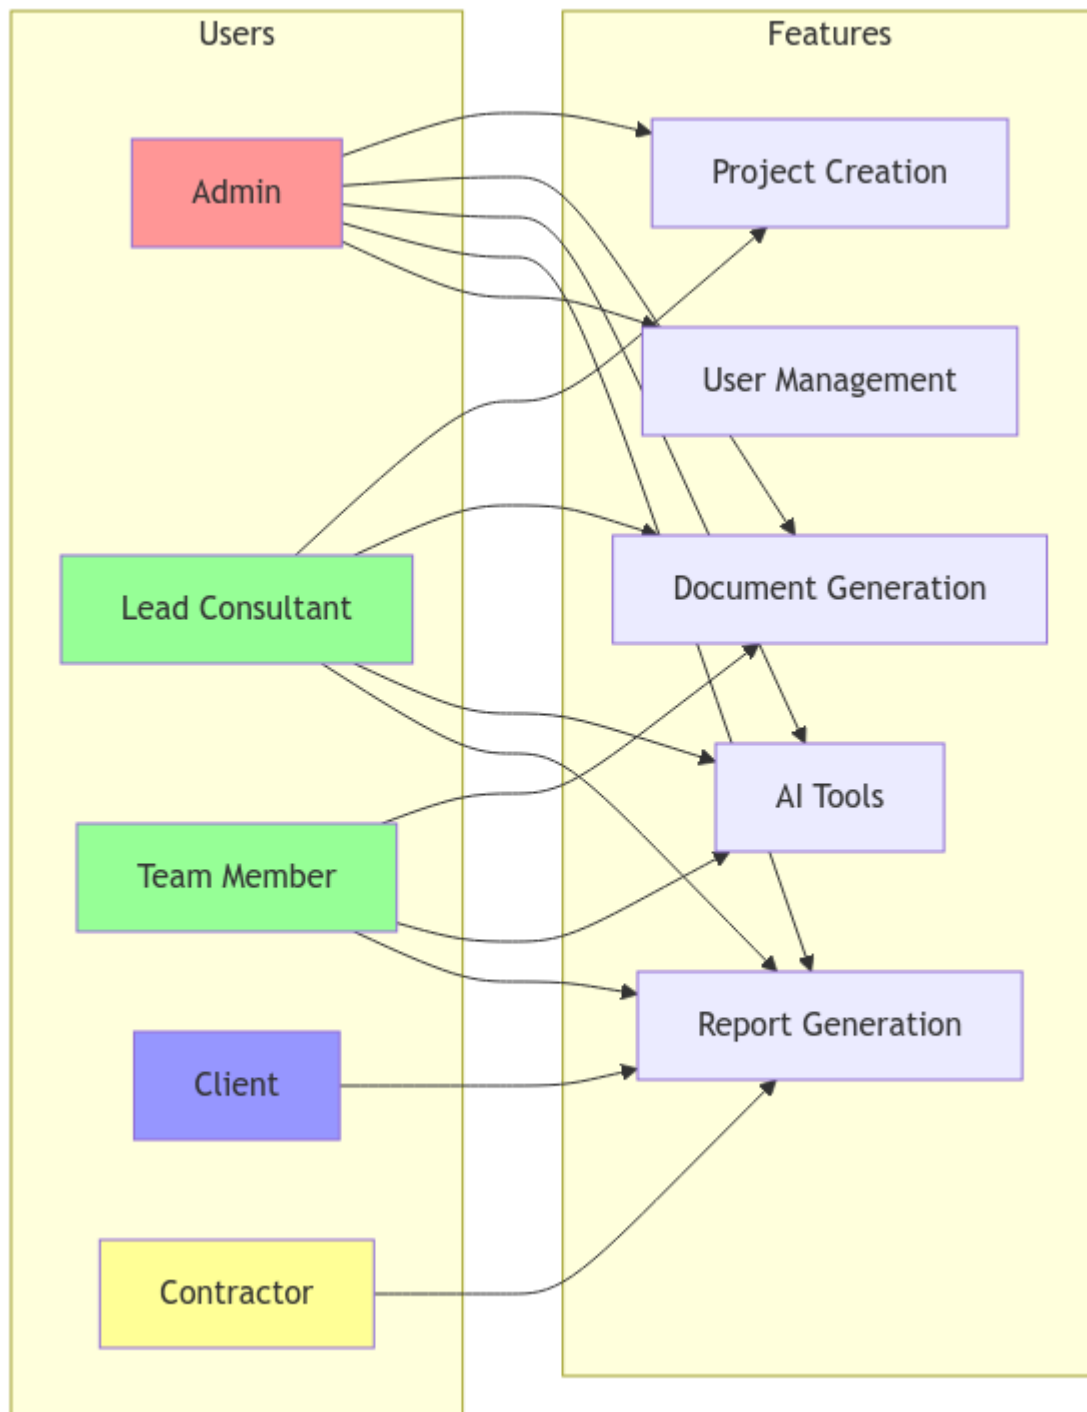

Document-Centric:

- Document belongs to one project
- Document can have multiple comments

- Document can have multiple AI analyses
- Document can have versions

Document Generation Sequence

1. Sustainability Consultants (Primary Users):

Registration & Access:

- Full registration with company details
- Professional credentials
- Team management capabilities

Features They Use:

- Dashboard for all projects
- Create and manage projects
- Generate documents (tender specs, action lists)
- Use AI tools for compliance checking
- Track project progress
- Assign tasks to team members
- Upload and manage documents
- Use pre-scoring tool
- Generate reports
- Communicate with clients/contractors

2. Building Owners/Clients:

Registration & Access:

- Limited registration (usually invited by consultants)
- View access to their projects only

Features They Use:

- View their project status
- Access project documents
- View action items assigned to them
- Upload required documents
- Track certification progress
- View reports
- Communicate with consultants

3. Contractors:

Registration & Access:

- Limited registration (invited by consultants)
- Project-specific access

Features They Use:

- View assigned action items
- Access relevant documents
- Upload construction documents
- View requirements/specifications

- Track their tasks
- Communicate with consultants

4. Team Members:

Registration & Access:

- Added by lead consultant
- Team member permissions

Features They Use:

- Handle assigned projects
- Use document generators
- Track assigned tasks
- Upload/manage documents
- Use AI tools
- Generate reports

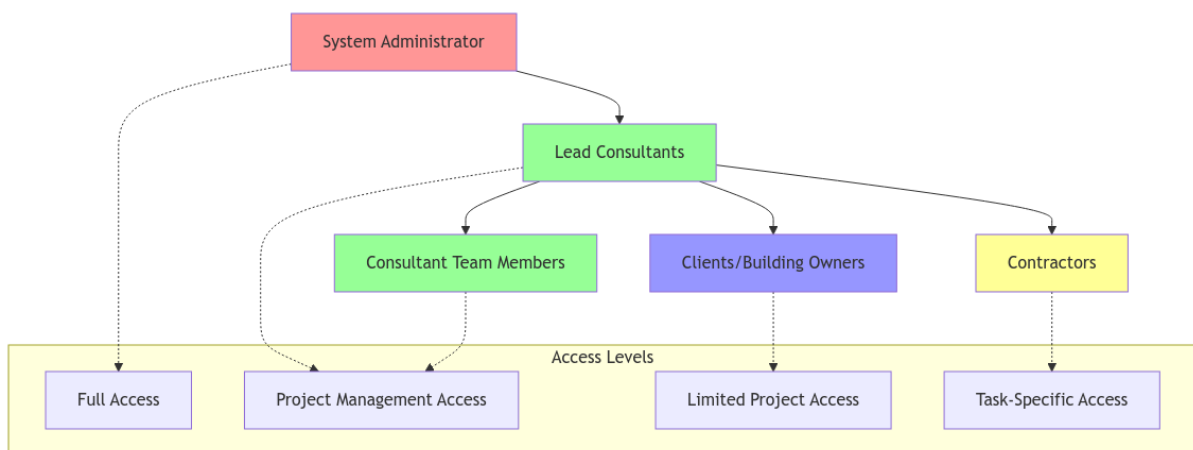

5. System Administrator

Registration & Access:

- Super admin access
- Created during system setup

Features They Use:

- User management
- System configuration
- Monitor system usage
- Handle support requests
- Manage templates
- System maintenance

Breakdown of Required Functionalities:

1. Project Repository (Core Dashboard):

- Project listing with filters:
 - * By consultant
 - * By certification type
 - * By contract value
 - * By typology
 - * By project stage
 - * By documentation status
- Project monitoring:
 - * Red-flag detection system
 - * Documentation progress tracking
 - * Project stage tracking
- Per project details:
 - * Client information
 - * Contract value
 - * Certification targets
 - * Project timelines
 - * Stage-specific status

2. Pre-Scoring Tool:

- Input parameters:
 - * Project location
 - * Project typology
 - * Certification type
 - * Target score
- Functionalities:
 - * Generate initial scorecard
 - * Use historical data for predictions
 - * Pre-fill assessment forms

3. Action List Generator:

- Excel integration:
 - * Upload scorecard capability
 - * Extract scored credits
 - * Parse Excel documents

- Task management:
 - * Generate stage-specific tasks
 - * Auto-assign to disciplines:
 - Architect
 - M&E
 - C&S
 - Contractor
 - Client
- Timeline features:
 - * Predict submission dates
 - * Set realistic deadlines
 - * Align with project schedule
- Output generation:
 - * Customised Excel outputs per party
 - * Discipline-specific lists
 - * Weekly/monthly action lists

4. Tender Specifications Generator:

- Input handling:
 - * Contract type selection (Design & Build / Build Only)
 - * Scorecard integration
 - * Project requirements input
- Document generation:
 - * Discipline-specific sections
 - * Auto-divide specifications
 - * Generate editable documents
- Validation:
 - * AI-powered validation
 - * Cross-check with other consultants' documents
 - * Requirements verification
- Dashboard features:
 - * Prerequisites view
 - * Credit requirements
 - * Associated documentation needs

5. Project Progress Tracking:

- Timeline management:
 - * Multi-project view
 - * Individual project timelines
 - * Milestone tracking
 - * Deadline monitoring
- Credit tracking:
 - * Attempted credits list
 - * Score calculation
 - * Documentation status
 - * Completion percentage
- Alert system:
 - * Deadline notifications
 - * Red-flag alerts
 - * Issue warnings
- Resource management:
 - * Consultant workload view
 - * Multi-project planning

6. AI Copilot:

- A. AI Chatbot:
 - Query handling:
 - * Green building standards
 - * Certification guidelines
 - * Best practices
 - * Project-specific questions
 - Document processing:
 - * Document summarization
 - * Table extraction
 - * Structured data extraction
 - * Key insights identification
 - Privacy features:
 - * Private LLM deployment
 - * Sensitive data handling
 - * Security measures

B. Compliance Monitoring Tool (Beta):

- Document verification:
 - * OCR processing
 - * Rule-based analysis
 - * Standards compliance check
- Reporting:
 - * Compliance reports
 - * Issue identification
 - * Action recommendations
- Database management:
 - * Regular updates
 - * Standards tracking
 - * Regulation changes

7. Additional Requirements:

- User Management:
 - * Role-based access control
 - * User permissions
 - * Client access portal
- File Management:
 - * Document storage
 - * Version control
 - * File organisation
 - * Sharing capabilities
- Reporting:
 - * Progress reports
 - * Compliance status
 - * Project analytics
 - * Performance metrics
- Integration Capabilities:
 - * Email notifications
 - * Calendar integration
 - * Export functionality
 - * API access
